

Project 1

Weather Data Script

Description

This script is meant to gather weather data from the OpenWeatherAPI. For more information on the API, please visit the website.

The script allows the user to input Zip Code or City information to provide current weather data for the location provided.

Usage

1. Download the script
2. Open the terminal
3. Navigate to the location where the file is saved
4. Run the following command `python \Weather-Data-Script.py`

Limitations

This script works for US Cities and Zip codes only

The API key provided does not expire. If there is an API key error, please visit OpenWeatherAPI to create a free API key and replace it in the script.
